

Country: France

Committee: Economic and Social Council

Delegate: Alexis Corona

1. Opening Statement

France believes that the infectious disease can be a massive threat to our public's health and it should be addressed as soon as possible. The infectious disease may cause a global pandemic from being highly contagious. To protect our the population of the more vulnerable we believe we should do anything to stop it. The novel coronavirus (NCoV) has fatality rates of 16 out of 27, which can be a bigger risk to the undeveloped countries. Although France has a highly developed health care system, there are still major threats of the virus infecting more people than the health care system can handle.

2. National Actions

France has released all the health statistics to the United Nations (UN). We have also released information of the patients which lead the UN to seek the source of the problem, which was travel to the Middle East. The NCoV virus has only infected one man from France which he got from traveling to Dubai. Therefore France may potentially put a stop to traveling to Middle Eastern countries to secure the population. We would also like to monitor what goes in and out of the country by putting military checkpoints along the borders of France.

3. United Nations Actions and International Actions

France has released all the health statistics to the United Nations (UN). We have also released information of the patients which lead the UN to seek the source of the problem, which was travel to the middle east.

4. Recommendation for Actions

France would like to work with the UN and other organizations to find a cure for the virus. We also have the top scientist of the country creating a vaccine, we would like to provide other countries with the vaccine once it is completed to prevent outbreaks. France would like the UN to help the undeveloped countries that are incapable of handling the major effects of an outbreak. The UN should be stationed at undeveloped countries making sure the virus does not cause a pandemic, the UN should also be in charge of distributing and giving the injections.
